Flutter Basics for Web
Developers: Stateless vs
Stateful Widgets

-
- A world map illustrating the global distribution of 1000 red location pins. The pins are most densely concentrated in North America, Europe, and East Asia, with significant clusters in the United States, Canada, Western Europe, and China. Other notable clusters are found in South America (primarily Brazil and Chile), Africa (northern and southern regions), and Oceania (Australia and New Zealand). The map includes labels for major continents (North America, South America, Europe, Africa, Asia, Australia, New Zealand) and oceans (North Atlantic Ocean, South Atlantic Ocean, Indian Ocean, Pacific Ocean). The pins are represented by red circular markers with black outlines, each indicating a specific geographic location.

Table of Contents

1. Expected Outputs
2. What We'll Learn
3. Flutter Introduction
4. Build Along
5. Introducing OpenAPI

1. Expected Outputs

- A mock-up of Pokédex
- Lists the first 25 entries from Pokédex

2. What We'll Learn

- What Flutter is and Why Flutter over other choices
- Building with Stateless Widgets
- Adding images and fonts into a Flutter app
- Fetching data over the network
- Creating structured data from Fetched Data
- OpenAPI and its tooling for developer productivity

3. Flutter Introduction - What is Flutter

- Developer tooling to create cross-platform mobile applications
- Solves pain point of maintaining multiple codebase for both iOS and Android platforms
- Comparable to [React Native](#) from Meta

3. Flutter Intro - Why Flutter over React Native

Pros:

- Genuinely Consistent UI compared to React Native
- Good amount of Widgets to start with

Cons:

- A steeper learning curve compared to React Native (Dart vs JavaScript/TypeScript)
- Less perceived demand of Flutter developers in Hong Kong

4. Build Along

Prerequisites:

- Flutter SDK configured with your IDE of choice (<https://docs.flutter.dev/install/quick>)
- A smartphone w/ USB cable (optional, **chrome** can be used as a fallback)

4. Build Along - Step-by-Step Instructions

<https://nbenedictcodes.com/notes/2026-08-07-gdghk-flutter-study-group>

5. Introducing OpenAPI

- A machine-readable contract document between client and server
- Used to bridge gaps between cross functional teams
- Created by two methods:
 - Code-First (e.g., Swagger Integration in [FastAPI](#), [NestJS](#))
 - Design-First (e.g., by-hand or [ApiFiddle](#))
